

HSBC Asset Management Red Equity Unconstrained (TL) Fund (Equity Intensive Fund) (HKR)

This Basic Information Document and Prior Information Form has been prepared to ensure that investors comprehend the structure, fundamental features and risks of the mutual fund and take their investment decisions in a more deliberate manner. This document is not a sales or marketing document. This document has been prepared to ensure that investors understand the fundamental features and potential risks of the fund. It is recommended that investors take a decision after reading this document.

About the Fund

This fund is subject to HSBC Asset Management Unconstrained Umbrella Fund and managed by HSBC Asset Management A.Ş. which is a subsidiary of HSBC Group*. This fund was established for customers of HSBC** who are willing to take “**Very High Risk**” and is managed in accordance with the long term investment horizon. For this reason, it may not be suitable for the investors who are willing to leave the fund the in short term.

*HSBC Group includes HSBC Holdings plc, its subsidiaries and affiliates.

**References to the HSBC Group of Companies are references to HSBC Holdings plc, its subsidiaries and its associated companies.

Goals and Investment Strategy of the Fund

- Fundamentally, at least 80% of the total fund value is continuously invested in the partnership shares of domestic issuers and in the participation shares of domestic exchange traded funds established to follow the indices consisting of these shares. In line with the analysis of other factors affecting the economic and financial markets, and the investment prediction to be formed according to the expectations, only Turkish Lira (TL) denominated money and capital market instruments, contracts to be a party, financial transactions and securities and other investment instruments deemed appropriate by the Capital Markets Board of Türkiye can be included in the fund portfolio.

- Only TL-denominated assets and transactions will be included in the fund portfolio. Foreign currency assets, gold and other precious metals and capital market instruments based on them and/or organized and over-the-counter derivative instruments for these will not be included in the fund portfolio.

- Leveraged transactions can be made to generate returns for the Fund and to control risks. These transactions may include futures contracts, option and swap contracts, warrants, certificates, forward maturity bonds and bills, repo transactions, credit utilization, short selling and other similar transactions that create leverage. None of these instruments, contracts and transactions

can be created from foreign currency assets and gold and other precious metals and capital market instruments based on them.

- **If, on any of the fund trading days, the total amount of the fund participation share sale orders is higher than 5% of the total fund value, the Fund founder has the right to extend the maturity, taking into account the request date and demand priority, to pay within 10 working days following the exit instructions. In such a case that may occur, investors are notified as quickly as possible by one of the communication ways available nowadays.**

- Due to its umbrella structure in accordance with CMB regulation, the Fund can only be invested by Qualified Customers. From the moment Qualified Customer criteria is not met, the investment institution you are trading with should be informed immediately.

- HSBC Asset Management A.Ş. is responsible for determining the financial instruments to be invested in.

Threshold Value of the Fund

The threshold value of the fund has been determined as 100% BIST 100 Yield Index.

Asset Allocation of the Fund**Risk Profile of the Fund**

HSBC Assets Management Red Equity Unconstrained (TL) Fund (Equity Intensive Fund) is compatible with the risk profile of customers who are willing to take “**Very High Risk**”. It is possible to have capital loss in HSBC Assets Management Red Equity Unconstrained (TL) Fund (Equity Intensive Fund). HSBC Asset Management A.Ş. does not guarantee any return to the customer.

No Investment Risk	Very Low Risk	Low Risk	Moderate Level Risk	High Risk	Very High Risk
--------------------	---------------	----------	---------------------	-----------	----------------

It should be noted that not all the funds have the same risk grade. The ones that have higher-than-average risks potentially offer higher returns but there is also a probability of loss. Although the riskier funds have a higher probability of loss, they may offer higher returns when the market tends to grow.

Management Fee and Commission

Annual management fee of the fund is 2,90%. Fund management fee is calculated daily over total fund amount with determined management fee ratio. There is no subscription/redemption fee, commission or performance premium for this fund.

Details of account opening, maintenance and custody fees and commissions paid to Central Registry Agency ("CRA") for the operations performed on behalf of investors for mutual fund transactions can be found on http://www.hsbc.com.tr/eng/retail_banking/interest_rates_and_fees/fees.asp#6. All of the specified fees and commissions are transferred to CRA as income.

Tax

HSBC Assets Management Red Equity Unconstrained (TL) Fund (Equity Intensive Fund) is subject to 0% withholding tax for real persons and corporates.

Subscription and Redemption Principles

- Subscription orders given between 10:45-13:30 on the working days (in half working days 10:45-11:00) will be realized with the share price announced same night and orders will be executed next morning (T+1).
- Redemption orders given between 10:45-13:30 on the working days (in half working days 10:45-11:00) will be realized with the share price announced same night and the order will be executed on the next second working day (T+2).
- One working day will be added to the above for the realization of subscription and redemption orders given between 13:30-15:00. (in half working days 11:00-12:00)
- When you want to buy funds, the amount is invested in HSBC Asset Management Money Market Fund and is kept in your account until fund shares are transferred to your account. If the amount you wish to purchase is lower than the unit price of the money market fund, no

money market fund is sold for the purpose of accretion of interest and your balance will be kept in your account until the amount of your deposit is transferred to your account.

- Subscription and redemption orders can be given through HSBC Bank branches, Internet Banking, Telephone Banking, Mobile Banking and ATM channels.
- Any fund order placed between 10:45 and 13:30 can be cancelled until 13:30 on the same working day whilst any order placed between 13:30 and 15:00 can be cancelled until 15:00 on the same business day or between 10:45 to 13:30 on the next business day.
- Fund subscription prices are announced after 10:45. The trading hours and operational process of the funds may differ. The operational process may be extended on holidays when the foreign markets are closed.
- Fund subscription and redemption orders cancellation transactions can be made through HSBC Bank A.Ş. branches, Internet Banking, Mobile Banking, Telephone Banking and ATM.
- Fund subscription prices are announced after 10:45. The trading hours and operational process of the funds may differ. The operational process may be extended on holidays when the foreign markets are closed.
- As per the new Capital Market Law all mutual funds pertaining to institutions that are a member of Türkiye Electronic Fund Distribution Platform (TEFAS "Platform") are traded on TEFAS.
- Current fund prices can be found in HSBC branches, internet, telephone, mobile banking and ATM.
- Your fund shares are registered and monitored in the account by MKK (Central Securities Depository) personally opened for you in dematerialized form.
- This fund is traded on Türkiye Electronic Fund Distribution Platform (TEFAS).

Restrictions on Sale of Investment Products to the Residents of US and Canada

Fundamental Risks for Mutual Funds

Market Risk: Market risk is defined as the risk of loss in value of the fixed income financial instruments, equities, other securities, share prices and interest rates.

Interest Rate Risk: If interest-based assets (borrowing instruments, reverse repo, etc.) are included in the fund portfolio, it represents the risk arising from changes in the interest rates in the market.

Partnership Share Price Risk: In case the partnership share is included in the fund portfolio, it represents the probability of loss that the portfolio will be exposed to due to changes in the prices of partnership shares in the fund portfolio.

Country Risk: A combination of economic, political and regulatory risks in a country.

Counterparty Risk: The possibility of the non-payment risk, in case when the counterparty does not want to and/or cannot fulfil its duties specified on the agreement, or due to consequences of any inconveniences that may arise during the settlement process.

Operational Risk: The possibility of loss due to disruption in the fund's operational processes. In house factors like; inadequacy of systems used, unsuccessful management, incorrect or fraudulent transactions of staff and factors like natural disasters, conditions of competition, changing politic structure can be causes of operational risk.

Correlation Risk: It is the probability of loss that may arise due to positive or negative relations of at least two different financial assets in parallel with the simultaneous appreciation or loss of different financial assets under market conditions.

Leverage Risk: The possibility of losing more than the initial investment amount of the fund due to usage of the initial investment amount to open bigger positions, by investing in derivative instruments (futures and option contracts), embedded derivatives, SWAP contracts, warrant, certificate, or by creating leverage through bills/bonds with future value-date or any other method.

Liquidity Risk: The possibility of loss that arises in case the investment products held within the fund's portfolio could not be liquidated into cash with market price when required.

Legal Risk: The risk that the fund's shares may be adversely affected by the changes that may occur in the legislation and regulation of regulatory authorities after the sale.

Base Risk: It expresses the change in price difference between the current value of futures contracts and the value of the spot price of the relevant financial instrument. At the end of the contractual maturity, the forward price

and the spot price are equal to each other. However, the forward price and the spot price may differ from the theoretical pricing in the time elapsed between the transaction date and the maturity date for the related futures financial instruments in the fund portfolio. Therefore, here it refers to the risk of change in the Base Value throughout the contract's term.

Short Selling Risk: Indicates the risk of higher loss compare to the investment amount in the fund.

Concentration Risk: Indicating the risk as a result of intensive investment in a certain asset and / or maturity.

Issuer Risk: The possibility of loss arising from the failure of the issuer of the assets included in the fund portfolio to fulfil its obligations in whole or in part.

Ethical Risk: The risk of fraud, misconduct, embezzlement, theft, deliberate actions that may harm the Fund or crimes that may adversely affect the reputation of the Founder (e.g. money laundering).

Collateral Risk: It arises when investing in investment instruments based on credit risk; the investor undertakes the default risk of the reference country / company against the seller and gains a high return in return. If the credit valuation performance of the reference country / company experiences a deterioration above a certain level, the investor may have to make additional collateral payments.

Structured Investment Instruments Risk: In the event of unexpected and extraordinary developments, it is possible to lose all of the investment in structured investment instruments within or at the end of the maturity. If the return of the strategies created on the underlying assets of the structured investment instruments is negative in the relevant period, the investor may not receive any income at the end of the maturity period and the value of their investments may decrease below the initial value at the end of the maturity period. There is also counterparty risk in case of investing in structured investment instruments. The investor is exposed to the company's credit risk in relation to structured investment instruments and expects a return in line with this risk. In structured investment instruments, investors also take the payment risk of the issuer. Payment risk refers to the risk that the issuer institution will not be able to fulfill its obligations arising from structured investment instruments. Unusual correlation changes and liquidity problems that may arise in adverse market conditions pose significant risks for structured investment instruments. In the absence of market making, the liquidity risk of structured investment instruments is high. Fluctuations in market interest rates and underlying asset prices may affect the daily valuation of Structured

Investment Instruments. In the calculation of the Value at Risk (VaR) of the fund, the market risks arising from the Structured Investment Instruments are also taken into account along with the derivative instruments.

Option Sensitivity Risks: Among the risk sensitivities in option portfolios, there may be a wide range of risk sensitivity changes in the price change of the spot financial product subject to the transaction. Delta; It shows the change in the option premium caused by one unit change in the price of the related financial asset for which the option is written. Gamma; It measures the change in the delta of the option caused by the change in the price of the asset to which the option is related. Vega; It is the change in the option premium caused by the unit change in the price fluctuation of the option's underlying asset. Theta; It is the indicator that expresses the time factor, which is of great importance in risk measurements, and is the measure of the change in the option price according to the maturity. Rho; on the other hand, it is the measure of the change in the option price caused by the percentage change in interest rates.
